## DETAILED ACTION

### *Information Disclosure Statement*

1. The listing of references in the specification (i.e., at pp. 5-6) is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

### *Claim Rejections - 35 USC § 101*

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

3. Claims 1, 4, 5, 7-9, 11 and 12 are rejected under 35 U.S.C. 101 because the claimed invention lacks patentable utility. The claimed invention does not produce a "useful, concrete and tangible result" (MPEP § 2106), such as classification.

### *Claim Rejections - 35 USC § 103*

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being obvious over the admitted prior art in view of Pao et al. (US006134537A).
6. Admitted as prior art is a method, classifier, system and article of manufacture, the method comprising (spec. pp. 3-7 with respect to Fig. 1): performing RBF analysis on a plurality of inputs to produce a plurality of outputs; coupling each of the plurality of RBF outputs to a plurality of output nodes; multiplying each coupled RBF output by a weight selected for the

coupled RBF output; calculating a node output for each output node; and selecting a maximum output from the plurality of node outputs.

7. The admitted prior art does not teach PCA. Pao et al. teaches PCA (col. 3 line 62).  
Because Pao et al. teaches that the use of PCA is computationally efficient (col. 6 lines 24-26) and compatible with an RBF architecture (col. 9 lines 50-52), it would have been obvious to one of ordinary skill in the art, at the time of the invention, to add the teachings of Pao et al. to the admitted prior art.
